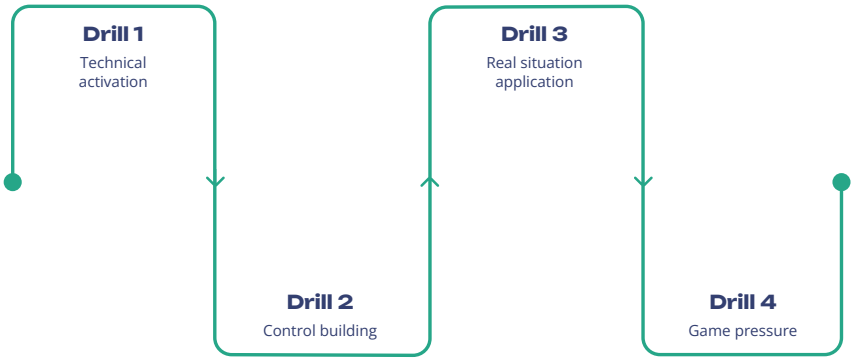
How to Use This Book

This ebook is your practical toolkit for delivering structured, proven tennis training sessions. Every page presents a complete training session designed for specific age groups and skill levels, with 3 to 4 court-tested drills that work together to build real skills. You don't need to guess what comes next or scramble to fill time—each session is ready to implement exactly as written.

The beauty of this system is its flexibility within structure. You can apply these sessions exactly as presented, knowing they've been tested with real players in real conditions. Or, if your group needs adjustments, you can modify duration and volume while keeping the proven progression intact. A 20-minute drill can become 15 or 25 minutes based on your class size, energy level, or facility constraints.

Think of each training session as a recipe. The ingredients and steps are provided, but you control the portions based on who you're feeding. This approach removes the mental burden of planning while giving you professional-grade content that earns parent trust and produces visible player improvement. No more arriving at the court wondering what to do next—just open to the appropriate age and level, and you're ready to coach with confidence.

Structure of an Effective Training Session



This sequence prevents improvisation and dramatically increases student retention by building skills in a logical, repeatable pattern.

Every training session in this book follows the same proven logic, creating a rhythm your players will recognize and trust. This consistency isn't boring—it's the foundation of effective learning. When students know what type of challenge comes next, they can focus entirely on execution instead of figuring out what you want from them.

Drill 1: Technical Activation warms up the specific movement pattern you're targeting. It's focused, often isolated, and sets the neuromuscular pathway for what follows.

Drill 2: Control Building adds complexity while maintaining success. Players repeat the technical pattern with added targets, rhythm, or constraints that develop consistency.

Drill 3: Real Situation Application places the skill into game-like context. Now the movement must happen with decision-making, positioning, and tactical awareness—bridging the gap between drill and match.

Drill 4: Game Pressure (when included) adds competition, scoring, or time constraints. This is where skills get tested under the emotional and physical conditions of real play.

Age 6–9 | Beginner Level

AGES 6-9 | BEGINNER

Training Objective

Develop coordination, consistent ball contact, and confidence through movement patterns that feel natural and fun. At this age, technical perfection is less important than creating positive associations with the swing motion and building the neurological pathways for hand-eye coordination.

Rainbow Swing to Target

Players practice the arc of a proper groundstroke by swinging over a visual rainbow path, finishing with the racket pointing at a large colorful target. This builds spatial awareness and swing path memory.

Bounce-Hit Rhythm

Students call out "bounce-hit" while making contact, developing timing awareness and the critical skill of tracking the ball through the bounce phase—the foundation of all groundstroke consistency.

Two-Hand Catch then Hit

Before each swing, players catch the ball with two hands, then immediately hit. This creates body balance, proper positioning, and eliminates the reaching or lunging that young players often default to.

High-Five Finish

After every forehand, players finish with their hitting hand high enough to give you a high-five. This ensures proper follow-through, prevents stopping the racket at contact, and adds a fun social element to technical work.

This training session develops fluid swing mechanics, precise timing, and dynamic balance without overwhelming young minds with technical complexity. Each drill feels like a game while secretly building foundational movement patterns that will support every shot they learn for years to come. The progression from isolated swing path to rhythm awareness to balanced positioning creates a comprehensive first experience with stroke production.

Age 6–9 | Intermediate Level

AGES 6-9 | INTERMEDIATE

Training Objective

Improve stroke form and introduce basic topspin mechanics while maintaining the playful, game-based approach that keeps young players engaged. At this level, players are ready for more specific technical cues without losing the joy of hitting.

1

Forehand "Window" Topspin

Players swing through an imaginary window frame, brushing low to high to create topspin. The visual boundary helps them understand swing path while the brushing action introduces spin mechanics that will become automatic with repetition.

2

Backhand Step-and-Plant

Before every backhand, players take one deliberate step and plant their front foot. This builds the critical habit of moving into the ball rather than waiting for it, and establishes proper weight transfer from the ground up.

3

Volley Catch-to-Volley

Players alternate between catching balls at the net with their non-dominant hand and volleying them. This develops soft hands, quick reactions, and the compact punch motion essential for effective net play.

4

Serve Toss Freeze

Players toss the ball and freeze in perfect position before swinging. This isolates toss consistency—the most common serve error at every level—and allows you to correct arm position, balance, and posture before adding the complexity of the swing.

> The focus at this level is improving form and developing quality repetition without sacrificing the playful atmosphere that makes tennis fun for children. Each drill adds one specific technical element while keeping success rates high enough to maintain confidence and engagement.

Age 6–9 | Advanced Level

AGES 6-9 | ADVANCED

Training Objective

Introduce simple tactical patterns and basic decision-making while refining stroke variety and shot selection. Advanced young players are ready to understand not just how to hit, but when and where to hit different shots.

Session Components

- **Spin Explorer:** Players experiment with different swing paths to create topspin, slice, and flat shots, discovering how racket angle and path affect ball flight and bounce.
- **Inside-Out Forehand Pattern:** Students learn to run around their backhand to hit forehands to the opposite corner, building their first offensive pattern.
- **Net Reaction Volley:** Quick-fire volleys at close range develop reflexes, hand speed, and the ability to redirect pace without taking a big swing.
- **Crosscourt + Down-the-Line Combo:** Players hit two crosscourt balls for consistency, then change direction down the line when they see a short ball—their first tactical decision drill.

This training session teaches students to vary their shots and make better tactical choices based on ball position and court geometry. They're no longer just hitting—they're choosing. The progression from exploring different spins to executing specific patterns to making real-time decisions mirrors the cognitive development happening at this age. You're building tennis IQ alongside technique, creating players who think as well as they hit.

Age 10–13 | Beginner Level

AGES 10-13 | BEGINNER

Training Objective

Build consistency and establish technical routines that create reliable stroke production. At this age, players have better focus and body awareness, allowing you to emphasize quality repetition and movement habits that will serve them for years.

01

Baseline Basics: Big Target Rally

Players rally crosscourt into large target areas, focusing on margin over the net and depth beyond the service line. This builds the understanding that consistency comes from safety margins, not perfection.

02

Split-Step Alarm

Every time the opponent makes contact, players must split-step and call out "split!" This transforms the most important movement habit in tennis into an automatic response triggered by visual cues.

03

Cooperative 10-Ball Challenge

Working together, players try to sustain a rally for 10 consecutive shots. This removes competitive pressure while building rally tolerance, rhythm awareness, and the satisfaction of collaborative achievement.

04

Serve Start Line

Players serve from inside the baseline, gradually moving back as consistency improves. This ensures early success, proper technique development, and prevents the rushing or muscling that occurs when players start from the full distance too soon.

The importance of margin, rhythm, and split-step habits at this developmental phase cannot be overstated. These players are building the neural pathways and movement patterns that will either support or limit their game for the rest of their tennis lives. Emphasize quality, not power. Celebrate consistency over winners.

Age 10–13 | Intermediate Level

🔧 AGES 10-13 INTERMEDIATE

Training Objective

Develop point construction skills and teach the transition from defensive positioning to offensive opportunities. Players learn to recognize situations rather than just execute techniques.

Depth Dial (3 Speeds)

Players practice hitting the same target at slow, medium, and fast pace, discovering how speed affects margin and learning to modulate power without sacrificing control.

Crosscourt + Attack Short Ball

Rally crosscourt until receiving a short ball, then attack down the line or inside-out. This teaches pattern recognition—the critical skill of identifying when to change from building to attacking.

1

Serve + Return + First Ball

Players serve, the partner returns, and they play out one more shot. This isolates the most important shots in tennis while building the habit of having a plan for the first ball after the return.

2

Approach + Volley + Overhead Sequence

Complete the attacking sequence: approach shot, first volley, second volley, overhead. This builds the full transition game in one connected drill.

This training session helps students understand when to attack and when to build points through patience and positioning. They're developing tennis intelligence—the ability to read the ball, recognize patterns, and make tactical decisions in real time. The progression from pace control to pattern recognition to complete point sequences creates players who can think their way through matches, not just hit their way through them.

Age 10–13 | Advanced Level

AGES 10-13 ADVANCED

Training Objective

Develop tactical control and execution under pressure. Advanced players at this age are ready for complexity, decision-making under stress, and the discipline required to execute patterns even when uncomfortable.

Heavy Topspin Height Challenge

Players must clear a rope suspended 6-8 feet above the net while maintaining depth. This forces proper low-to-high swing paths and teaches that aggressive topspin comes from brush and trajectory, not just speed. The visual constraint prevents the flat, hard-hitting tendency that leads to inconsistency.

Backhand Change Direction Timing

Feed crosscourt backhands, and on a random ball, call "change!" The player must redirect down the line with the same swing but different contact point and body positioning. This develops adaptability and the ability to execute technical adjustments mid-rally.

Serve + 2 Pattern

Players must execute a specific three-shot pattern: serve to a target, return goes crosscourt, and the third shot attacks to a designated zone. This builds the ability to plan ahead and execute under the pressure of a predetermined tactical sequence.

Pattern Tournament

Play points where specific patterns earn bonus points. For example: crosscourt rally to short ball attack = 2 points, serve + attack second ball = 3 points. This creates tactical pressure and rewards strategic thinking over power.

> This training forces consistency before aggression—a critical concept for competitive development. Players learn that control enables power, not the other way around. They discover that winning tennis requires discipline to execute the right shot in the right moment, even when the instinct is to go for too much too soon.

Age 14–18 | Beginner Level

AGES 14-18 | BEGINNER

Training Objective

Establish a solid competitive foundation by reducing unforced errors and building confidence to compete. Teenage beginners need clear, actionable technical frameworks that produce immediate improvement and the self-assurance to step onto a match court.

Unlike younger beginners, these players can grasp more sophisticated concepts and benefit from understanding the "why" behind each drill. They're also more self-conscious and need success experiences to overcome fear of judgment.

1 Contact Window Calibration

Players identify and mark their ideal contact point for forehands and backhands using visual and proprioceptive cues. Understanding where the "window" exists—and learning to move to it rather than reaching—transforms random ball-striking into purposeful technique.

2 Forehand Shape: Lift then Drive

Practice two distinct forehand trajectories: heavy topspin "lift" shots that clear the net by 5+ feet, and flatter "drive" shots with lower net clearance. This teaches that shot selection changes swing shape, not just speed.

3 Crosscourt Safe Zone Rally

Rally exclusively crosscourt into generous target areas, emphasizing depth and safety margins. This builds the most reliable shot in tennis and creates the foundation for point construction.

4 Serve Basics: Toss-Then-Swing

Separate the toss from the swing. Perfect the toss location with 10 repetitions, then add the swing. This isolated approach prevents compensation patterns and builds serve consistency from the ground up.

Age 14–18 | Intermediate Level

AGES 14-18 | INTERMEDIATE

Training Objective

Master the transition between attack and defense by learning to recognize real opportunities and execute the appropriate response. Intermediate players at this age understand tactics conceptually but struggle to apply them under match pressure.

1 Depth + Direction "Two Choices"

Rally with only two options: deep crosscourt (building) or short down-the-line (attacking). This simplifies decision-making and teaches that shot selection comes from ball quality, not randomness.

2 Crosscourt + Change on Short Ball

Build crosscourt until receiving a ball inside the service line, then change direction. This trains pattern recognition—the ability to identify the specific trigger that converts defense into offense.

3 Serve + Return + 2 Live

Play out four total shots (serve, return, two more) and freeze. Analyze positioning, shot selection, and tactical choices before playing the point out fully.

4 Overhead + Recovery Volley

Hit an overhead, immediately recover to net, and finish with a volley. This builds the complete attacking sequence and prevents the common error of admiring the overhead instead of closing.

Key Learning

Players learn to recognize real opportunities based on court position, ball height, and opponent location—not just hitting hard whenever they feel like it. This is where tennis IQ separates players of similar technical ability.

Age 14–18 | Advanced Level

AGES 14-18 ADVANCED

Training Objective

Execute tactical patterns in game context with match-level pressure and decision-making complexity. Advanced teenage players need drills that simulate the physical, mental, and emotional demands of competitive tennis.

Pace Absorption + Re-Acceleration

Defend against heavy balls by absorbing pace with stable positioning and short backswing, then counter-punch back with interest when the opportunity appears. This builds defensive skill and offensive transition from uncomfortable positions.

Serve Patterns: Wide + 1 to Open

Serve wide to pull the opponent off court, then attack the open court with the next shot. Practice the complete two-shot pattern until it becomes automatic under pressure.

Live Pattern Points

Play points where both players must execute predetermined patterns. For example: server must serve + approach, returner must return low and pass. This creates controlled match simulation.

Situational Points

Start points at specific scores (30-40, deuce, game point) to practice execution under the exact pressure situations that occur in matches. Mental toughness is a skill that must be trained, not just hoped for.

These drills simulate the real pressure of match play—the physical demand of defending and counter-attacking, the strategic discipline of multi-shot patterns, and the mental challenge of executing while the score matters. This is where practice becomes performance training.

Adults (18+) | Beginner Level

ADULTS 18+ | BEGINNER

Training Objective

Build confidence, establish rhythm, and develop stroke control through clear, simple technical frameworks. Adult beginners need immediate success experiences and logical explanations to stay motivated through the challenging early learning phase.

Why Adults Learn Differently

Adult beginners bring self-awareness, analytical thinking, and goal orientation—but also self-consciousness, fear of looking foolish, and often limited athletic backgrounds. They need clarity and simplicity to evolve quickly, plus social support to overcome the vulnerability of learning a new physical skill in front of others.

Unlike children who learn through play and repetition, adults want to understand the logic behind each drill. They'll commit to practice if they understand why it matters and how it connects to playing actual tennis.

Simple Rally Blueprint

Rally with one goal: keep it going. Remove all other variables and just experience the rhythm of back-and-forth ball exchange.

One-Cue Forehand Session

Practice with a single technical focus per session—contact point, or follow-through, or shoulder turn. One clear cue prevents overwhelm.

Rally "Safety First"

Hit every ball with 3+ feet of net clearance and land it deep. This teaches that margin enables consistency—the opposite of the "hit it hard and hope" approach most adult beginners default to.

Serve Comfort Zone

Find the distance where you can serve 8/10 balls in, then practice from there for several sessions before moving back. Success breeds confidence, and confidence enables technical improvement.

Adults (18+) | Intermediate Level

ADULTS 18+ | INTERMEDIATE

Training Objective

Reduce errors and improve attack timing by understanding when to build points and when to finish them. Intermediate adults often hit decent shots but lose matches because they choose the wrong shot at the wrong time.

1

Crosscourt Reliability Test

Rally crosscourt and count consecutive shots. Your personal best becomes your baseline for improvement—objective, measurable progress.

2

Neutral to Attack Game

Rally until someone receives a ball above net height and inside the baseline—that's the signal to attack. This teaches what an actual opportunity looks like.

3

Serve + 1 Accuracy Challenge

Serve and place the next shot into a designated zone. This builds the habit of having a plan for the shot after the serve—instead of just reacting.

4

Defensive Lob & Smash Decision

When under pressure, practice the defensive lob. When receiving a short lob, practice the overhead. This completes the vertical game that separates recreational from competitive play.

This training session teaches students to construct before accelerating. They learn that winning tennis isn't about hitting winners—it's about not giving points away. The progression from reliability testing to opportunity recognition to planned sequences creates players who think strategically instead of just reacting emotionally.

Adults (18+) | Advanced Level

ADULTS 18+ ADVANCED

Training Objective

Develop performance-level execution and winning patterns through routines that demand technical precision and emotional control. Advanced adult players need systematic approaches to the mental and tactical aspects that separate strong club players from competitors.

Heavy Ball Training

Practice generating pace through spin, body rotation, and optimal contact—not just arm speed. Feed heavier balls and force players to maintain technique under increasing physical demand. This develops the ability to compete against pace without resorting to defensive pushing.

Serve + 3 (Realistic Construction)

Execute a complete four-shot pattern: serve placement, predicted return location, response shot, and finishing opportunity. This trains the tactical planning and pattern recognition that occur naturally in high-level players but must be deliberately practiced by everyone else.

Pattern-Only Points

Play points where you're only allowed to use predetermined shot combinations. For example: serve wide + forehand inside-out, or crosscourt rally + short ball attack. This forces tactical discipline and prevents the random shot-making that characterizes most recreational tennis.

Routine Under Pressure

Practice your between-point routine (towel, strings, bounce, breathe) after every single drill ball—even in practice. Mental toughness and emotional regulation are skills that must be trained systematically, not just activated during matches.

> The focus at advanced adult level is pattern consistency, routine discipline, and emotional control. Technical ability plateaus relatively early—what continues to improve is tactical sophistication, mental resilience, and the ability to execute under pressure. These drills train the invisible skills that determine match outcomes.

How to Build 60-Minute Training Sessions

Practical Time Structure

Effective 60-minute sessions require efficient transitions and purposeful pacing. Every minute matters when you have limited time to create meaningful skill development. The key is having a predetermined structure that you execute without wasted time between drills.

This structure ensures technical development, skill consolidation, tactical application, and competitive experience all happen in a single session.

Time Allocation Breakdown

10 minutes: Technical Drill — Warm up with focused movement quality. Examples: contact point calibration, topspin brush mechanics, or volley punch technique. Keep it simple and specific.

20 minutes: Consistency Drill — Build reliability through repetition with targets. Examples: crosscourt rallies to zones, serve placement routines, or approach shot sequences. Success rates should be 60-80%.

20 minutes: Pattern Drill — Apply skills in tactical context. Examples: serve + attack second ball, defensive retrieve + counter, or transition sequences. This bridges technique and match play.

10 minutes: Game or Pressure — Compete with scoring or time constraints. Examples: pattern points, situational games, or challenge scoring. This tests everything under emotional pressure.

Use the training sessions provided earlier in this book as your building blocks. Pick an age-appropriate technical drill, pair it with a consistency drill that reinforces the same skill, add a pattern drill that applies it tactically, and finish with a game that creates pressure. The structure remains constant—you're just selecting which specific drills fill each time block.

How to Build 90-Minute Training Sessions

Extended Session Structure

Ninety minutes allows for deeper skill development and more sophisticated tactical work. The additional time should be used for increased volume and complexity, not just more of the same. The structure expands proportionally while maintaining the proven progression from technical activation to competitive pressure.

1

15 Minutes: Technical Development

Warm up with deliberate technical work on 1-2 specific movement patterns. The extended time allows for more detailed feedback, video analysis, or partner observation. Focus on quality repetition and movement refinement.

2

30 Minutes: Construction Phase

Build consistency and shot tolerance through medium-intensity drilling with targets and rhythm. This extended segment allows players to find their groove and develop the muscle memory that comes from sustained repetition.

3

30 Minutes: Patterns and Game Situations

Apply skills in tactical sequences and point construction scenarios. The longer duration supports complex multi-ball patterns, situational point play, and the strategic thinking required for competitive tennis.

4

15 Minutes: Pressure and Competition

Finish with scoring games, timed challenges, or competitive situations that test execution under stress. This ending ensures players leave the court having experienced the emotional demand of match conditions.

Intensity Variation

Alternate between high-intensity bursts and moderate-pace drilling to maintain focus and prevent physical or mental fatigue during longer sessions.

Within the 90-minute structure, vary intensity to maintain engagement and prevent burnout. The technical phase is moderate intensity with high focus. The construction phase should build from moderate to moderately-high intensity. The pattern phase includes both high-intensity bursts and moderate recovery segments. The pressure phase is consistently high-intensity but short enough to maintain quality.

Use water breaks strategically as natural transitions between phases, not as random interruptions. Brief your next drill during breaks so players return to the court knowing exactly what's next—this eliminates wasted transition time and maintains training momentum.

Adapting Drills for Group Training

Group Training Modifications

Group lessons require different logistics than private sessions, but the core drills remain the same. The key is modifying feeding patterns, target areas, and rotation structures while preserving the skill development objectives of each drill.

Reduce Feeds, Increase Targets

In groups, you can't feed every ball to every player. Instead, create larger target zones and have players rally to each other or feed from a ball machine while you provide coaching cues and corrections.

Use Rotation Systems

Design drills with built-in rotation so players move through different roles: feeder, hitter, collector, or rest position. This keeps everyone active and creates natural recovery intervals.

Transform into Collective Challenges

Convert individual drills into team challenges: "Can we make 50 crosscourt rallies as a group?" This creates social cohesion and shared purpose while maintaining technical focus.

Example Group Adaptation

Take the *Crosscourt + Attack Short Ball* drill from the intermediate 10-13 age group. In private training, you feed every ball and control the short ball trigger. In groups, modify it this way:

- Players pair up and rally crosscourt cooperatively
- After 4-6 balls, one player deliberately feeds a short ball
- Partner attacks down the line to a large target zone
- Reset and switch roles after 5 repetitions
- You circulate, provide feedback, and correct technique

The skill development remains identical—pattern recognition and attack timing—but the logistics accommodate multiple pairs working simultaneously. The core drill architecture is preserved; only the feeding mechanism changes.

Eliminating Improvisation in Training

The Cost of Improvisation

Showing up to the court without a plan doesn't make you flexible—it makes you unprofessional. Improvisation feels spontaneous and adaptive, but it actually creates three serious problems that undermine your coaching effectiveness and your students' development.

You Waste Training Time

Every minute spent deciding what to do next is a minute stolen from actual skill development. Transitions drag, explanations become unclear, and momentum dies.

Students Lose Confidence in You

Players recognize when you don't know what's next. Hesitation, changing plans mid-session, or random drill selection signals that you haven't thought about their development.

Learning Becomes Random

Without connected drills building toward specific objectives, students experience isolated activities instead of systematic skill progression. They don't improve—they just hit balls.

The Solution: Pre-Session Planning

Training Defined Before the Session — Select your complete session the night before or morning of training. Know exactly which drills you're running and in what order before the first student arrives.

Clear Objective Per Session — Every training session should target one primary skill area. Today we're building serve consistency. Tomorrow we're working crosscourt rally depth. Next session focuses on transition volleys. Clear objectives create focused sessions.

Connected Drills — Each drill should build on the previous one. Technical activation → consistency → tactical application → pressure. The progression should feel inevitable, not random.

> Improvisation reduces your authority as a coach. When you stand on court with a predetermined, logical training progression, you project competence and inspire confidence. Your students train harder because they trust you have a plan for their development.

Weekly Training Progression

Sample Weekly Structure

Strategic weekly planning creates cumulative skill development instead of random session-to-session activities. A well-designed training week follows a logical arc from technical refinement through pattern application to competitive pressure, allowing each session to build on the previous one while providing appropriate recovery and variation.

Day 1: Technique + Control

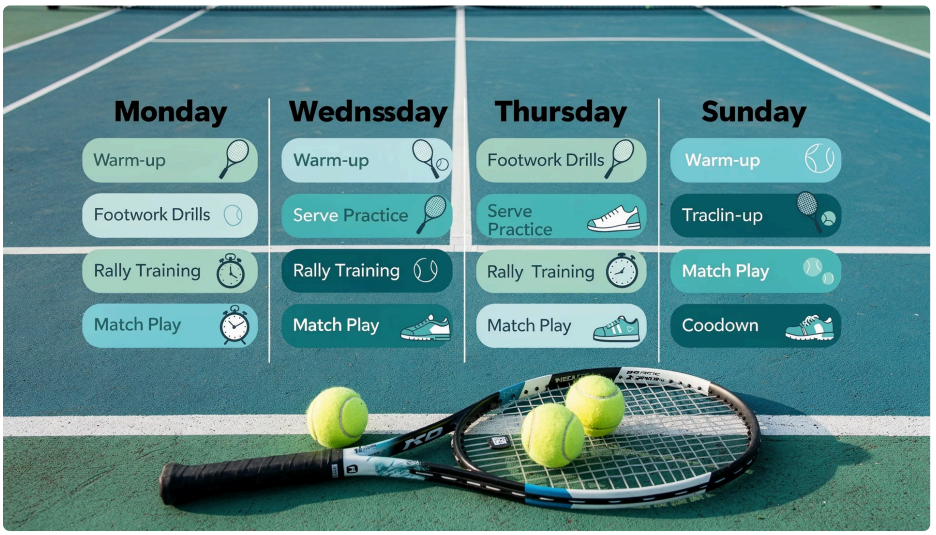
Start the week with technical focus and consistency drilling. Players are fresh and can handle detailed technical feedback. This session establishes the movement patterns that will be tested later in the week.

Day 2: Patterns

Apply Monday's technical work in tactical sequences. Students practice shot combinations, court positioning, and decision-making using the skills they refined the previous session.

Day 3: Game and Pressure

Test everything under competitive conditions. Play points with constraints, situational games, or challenge scoring. This is where technical work and tactical patterns face the pressure of actual competition.



Use the training sessions from this ebook as your building blocks. For Day 1, select a technical drill from the appropriate age/level section. For Day 2, choose a pattern-focused session that applies those same movements. For Day 3, implement the pressure and game drills that test execution under stress.

This weekly rhythm creates predictable progression while maintaining variety. Students know that Mondays focus on technique, Wednesdays on tactics, and Fridays on competition—but the specific drills rotate to maintain engagement. The structure is consistent; the content varies. This is how you build systematic improvement instead of random ball-hitting.

Practical Application: Your Next Steps

What You Now Have

This ebook is not theory—it's your practical arsenal of court-tested training sessions ready for immediate implementation. You now possess structured, age-appropriate, level-specific sessions that eliminate the mental burden of planning while delivering professional-grade content that produces visible player improvement.

200+

Ready-to-Use Drills

Complete training sessions across all age groups and skill levels

20

Complete Sessions

Structured progressions from technical activation to competitive pressure

100%

Court-Tested

Every drill has been proven with real players in actual training environments

Why This Approach Works

This system produces results because it focuses on **application, not theory**. You're not reading abstract coaching philosophy—you're receiving specific drills with clear objectives, proven progressions, and immediate applicability. These sessions work because they've already worked for hundreds of coaches and thousands of players.

The sessions are designed for **immediate court implementation**. No lengthy preparation, no complex equipment, no ambiguous instructions. Open the book, select the age-appropriate level, and run the session exactly as written. Your players improve, parents see progress, and you establish yourself as an organized, professional coach.

Most importantly, these training sessions deliver **real results, not busy work**. Every drill serves a specific developmental purpose. Every progression builds toward match-applicable skills. Every session creates measurable improvement in technical execution, tactical understanding, or competitive performance.

> Your next training session is already planned. Open this ebook, choose the appropriate age group and skill level, and implement the session as written. Experience the confidence of walking onto the court with a professional-grade training plan. Watch your students improve systematically instead of randomly. Build your reputation as the coach who always has a plan and always delivers results.

Stop improvising. Start implementing. Your training arsenal is ready.
